

Deferral of Treatment

Sometimes your treatment may need to be deferred. This may happen with any of the following circumstances / conditions:

- Low Haemoglobin below 10
- Haematocrit below 0.27
- Temperature 38° or above
- Low platelets below 20
- Vomiting or Diarrhoea until a stool sample is obtained an infection is ruled out
- Recent Blood clots (will not be able to treat for 6 weeks)
- Recent Heart Attack (will not be able to treat for 6 weeks)
- Shingles or chicken pox (cannot treat until all the lesions are dry)

Once your symptoms have resolved you will recommence your treatment however, if the deferral of treatment becomes prolonged you may need to be reassessed for treatment.
